

TAMPERTECH Teaches: What is a Dead Centre?

A Dead Centre is where adhesive isn't applied to the centre of a label, it most commonly comes in a Dumbbell label (Top) or a label with security cuts in the centre (Bottom).

So why use a dead centre?

- It is more hygienic for use over bottles
- It can be used to secure test tubes
- It allows a more secure security cut label
- When Protecting IT hardware it stops access to USB ports without damaging them
- Offers an additional security feature when securing rooms or buildings

With this feature tamper evident labels are extremely versatile from protecting buildings and IT, to drinks and scientific testing.
