

# TAMPERTECH Teaches: What is a security audit?

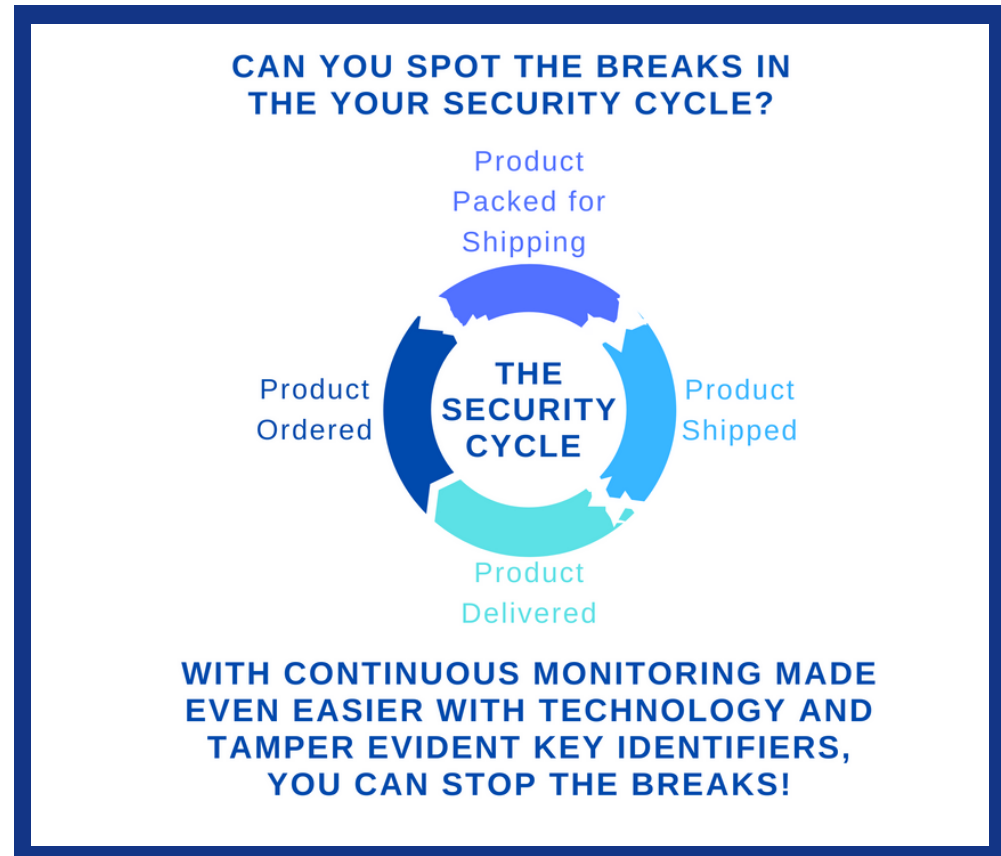

**Security audits are there to reevaluate your security approach ensuring that it is as secure as possible.**

Tamper evident security tapes and labels are an amazing layer of security, and can be even stronger with these simple steps:

- Change your void message to help deter counterfeits.
- Change the colour of your tamper evident labels or tapes.
- change the surface / subsurface print designs annually

These changes make ideal key identifiers to see if your products have been tampered with or replaced.

By doing this it makes counterfeiting packaging much harder, making pinpoint where in your supply chain a security break is happening much easier, allowing you to address security breach proactively.
