

# TAMPERTECH Teaches:

## What is UV Ink?

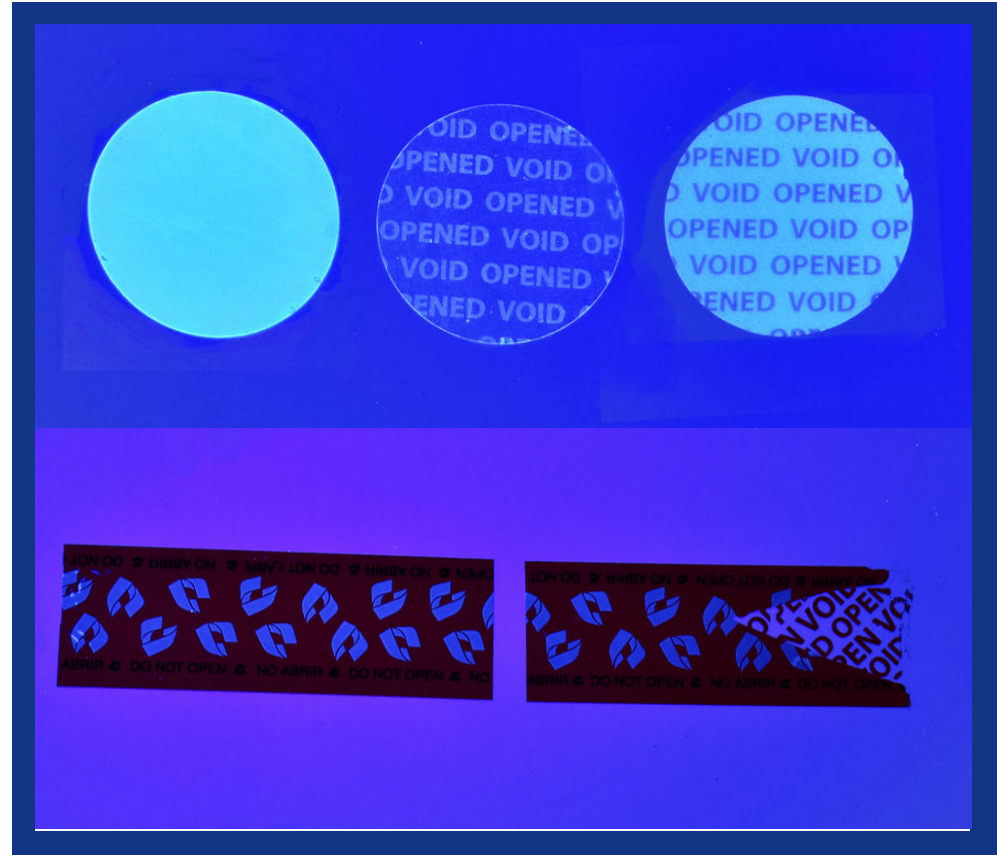

**Tamper evident tapes, labels and bag tape can have a custom UV ink printed**

So, what is UV ink?

UV ink is a specialist ink that glows under a black light. There are many reasons why people choose to have UV ink inlayed into their products from the additional layer of security making it that much harder to copy as an invisible watermark to ensure genuine product.

Other applications include room secure where routine checks are made more efficient by just being able to shine a black light and if the label is still there unvoided then the room is secure.

**If you have any other questions about our UVink's and potential uses for them do get in touch!**
