

# TAMPERTECH Teaches:

## Labels and Tapes for Cold Logistics

**Tampertech manufacture tamper evident tapes and labels still work when frozen and at ambient temperatures!**

The use of permanent cold logistic labels provides an additional layer of security seal, delivering a clear visual indication of tampering, providing positive control throughout the distribution system.

The technical void system designed for cold logistics allows end users to still have track and trace features for the surface and sub surface print.

The options include sequential numbering, barcodes, languages, logos and QR codes as seen here.

Cold logistic labels and tapes can be applied to rigid and flexible surfaces. We recommend you test the labels on your specific surface and experience the temperature challenges, to ensure the right label or tape is supplied for individual applications.

**If you have any other questions about our cold logistics tapes and label products do get in touch!**
