

TAMPERTECH Teaches:

What is a Void?

A Void is a key part of tamper evidence, it is the message or pattern revealed when the label is removed

So what are the different types of void?

- 1** Our P2350 Hybrid labels use a reverse void where the background is left behind and wording remains on the film.
- 2** Our X22 Labels our Non-Residue which means that although they still void on the label they don't leave anything on the surface they have been applied too.
- 3** Our Covert Box Tape has a standard void message where the wording is left on the surface it is applied too

Any of these Void styles can be completely customised to say or show anything that you want from logos and wording to QR and barcodes, anything you need can be shown here

If you have any other questions about our Void messaging get in touch!
